TIP THREE: <u>REPORTING DIAGNOSIS CODES</u>

Tip Three provides examples for reporting the diagnoses required by the Client and Service Information (CSI) system in the following data fields within the Service record:

S-09.0 Principal Mental Health Diagnosis, S-10.0 Secondary Mental Health Diagnosis, S-11.0 Additional Mental or Physical Health Diagnosis, S-34.0 General Medical Condition Summary Codes, S-37.0 Substance Abuse / Dependence, and S-38.0 Substance Abuse / Dependence Diagnosis.

International Classification of Diseases 10th Edition (ICD-10) code is required.

The Principal and Secondary Mental Health Diagnoses must be diagnoses for which mental health services are provided. The S-09.0 Principal Mental Health Diagnosis should reflect the diagnosis that is the primary focus of attention or treatment for mental health services. The S-10.0 Secondary Mental Health Diagnosis should reflect the diagnosis that is the secondary focus of attention or treatment for mental health services.

Up to three diagnoses are allowed in the data field S-11.0 Additional Mental or Physical Health Diagnosis. They may include mental, substance use, developmental disorders, or physical health disorders. If there are more than three diagnoses available to be reported, list the three most important.

Up to three General Medical Condition (GMC) Summary Codes from the list of general medical conditions provided are allowed in the S-34.0 General Medical Condition Summary Code field.

Identify whether or not the client has a substance abuse/dependence issue in the S-37.0 Substance Abuse/Dependence field. If the client does have a substance abuse/dependence issue, then report the substance abuse/dependence diagnosis in the S-38.0 Substance Abuse/Dependence Diagnosis field.

The following pages present examples of both valid and invalid diagnosis code reporting.
